

# Iris diaphragms

from the standard programme S (with snap ring)

Wholly of metal, leaves of spring steel, screwed in lever.

- A = external dimension in mm
- B = maximum and C = minimum aperture in mm
- D = thickness in mm
- E = number of leaves
- L = length of lever in mm
- M = lever position mm
- W = lever way °
- AR = leaves antireflex coated, heat resistant up to approximately 180°C
- N = leaves of spring steel, burnished, heat resistant up to approximately 250°C
- H = leaves of spring steel, stainless, heat resistant up to approximately 400°C

## Leaves burnished spring steel - N

# Iris diaphragms from the standard programme V (with retaining ring)

Casing of metal, synthetic flat lever or round metallic. Synthetic turning ring, especially smooth running and resistant to wear and tear, up to approximately 130°C constant temperature proof (in short bursts, up to approximately 160°C).

- A = external dimension in mm
- B = maximum and C = minimum aperture in mm
- D = thickness in mm
- E = number of leaves
- L = length of lever in mm
- M = lever position mm
- W = lever way°
- F = synthetic lever, flat
- R = metallic lever, round
- AR = leaves antireflex coated, heat resistant up to approximately 180°C
- N = leaves of spring steel, burnished, heat resistant up to approximately 250°C
- X = lever width mm
- Y = lever thickness mm
